

# A QUICK GUIDE TO TOUCH!

## Touch Coatings Permanent Anti-microbial Protection Coverage guide

Anti-microbial scientific definition - Anti-microbial is effective against a wide spectrum of microbes: this includes bacteria, mould, fungi and **viruses**. An antibacterial, on the other hand, is only effective against bacteria.

All coverage figures are for guidance only.

300ml of Touch coating can treat one complete 630Kg lift car and all landing fixtures

Or up to 10, five floor lift installations, including push buttons, fixtures, COP, handrails and other high contact surfaces., including MRL landing controller access and engineer contact points (pit ladders, emergency stop buttons, car top controls, emergency release controls)

1Lt Touch coating can treat up to five complete 630Kg lift cars with fixtures including the doors, push buttons, handrail and COP

Or 17 complete landing entrances (based on 900 x 2000mm clear opening)  
Or completely coat all treatable surfaces on 1, five floor , 630Kg lift.

Touch All Surface Anti Microbial Coating is suitable for many hard surfaces, including stainless steel, metals, laminates, plastics, wood, and glass\*

\* Please note that for glass applications only, we recommend that you use the services of an approved installer / applicator. Please contact the PEW sales team for further information

Based on stainless steel finishes, some lifts might require the use of both Touch Metal and Touch All Surface coatings, which, will, in turn, increase the amount of coverage. PLEASE NOTE THAT TOUCH METAL COATING IS ONLY SUITABLE FOR METAL SURFACES AND MUST NOT BE APPLIED TO ANY OTHER SURFACES OR PAINTED AREAS.
