

Touch Guard Anti-Microbial Coatings

Quick Application Guide

1. Pour a small amount of degreaser into the spray applicator bottle and then dilute to a ratio of 1 part degreaser to 10 parts water.
2. Apply thoroughly to the surface and then wipe off using one of the white lint free cloths, as supplied, ensuring that all dust, grime, other marks and impurities are removed.
3. Spray the degreased surface with water, before thoroughly wiping off with a blue micro fibre cloth, as supplied. Then leave for 15 minutes to allow the surface to dry.
4. Pour a small amount of Touch Guard coating into one of the roller trays provided, before very lightly coating the roller applicator. Alternatively, for smaller, more delicate areas, instead of the roller applicator, you can apply Touch Guard with a white lint free cloth, as supplied.
5. Whilst applying very light roller pressure on to the surface, ensure that the roller moves with the grain of the surface. Use consistent strokes, ensuring that the complete surface is coated with Touch Guard.
6. Use a white lint free cloth to wipe over the Touch Guard coated surface, using smooth, even strokes, ensuring that the coating is even, with no visible drip or smudge marks.
7. Leave the Touch Guard treated surface for an hour, until it feels dry to the touch.
