XPO SCREENS

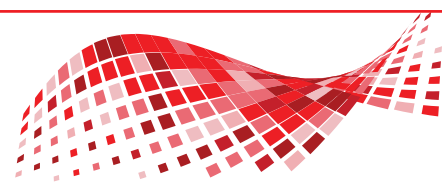

Digital elevator mirrors

- DYNAMIC CONTENT
- ENHANCED EXPERIENCE
- REAL-TIME INFORMATION
- EYE-CATCHING
- ELEGANT DESIGN
- PURPOSE-BUILT
- REMOTE MANAGEMENT
- ECO-FRIENDLY

The elevator presents an optimal opportunity for impactful communication. With captive audiences and targeted content, it's an ideal space for sharing information, entertainment, or advertising.

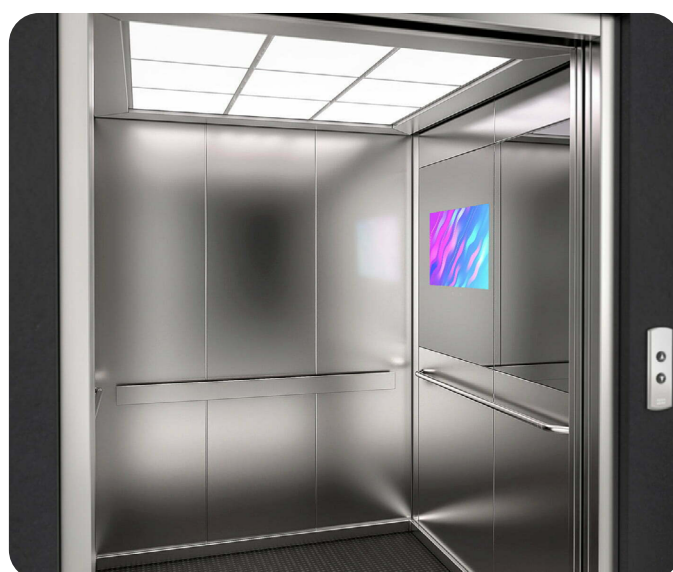

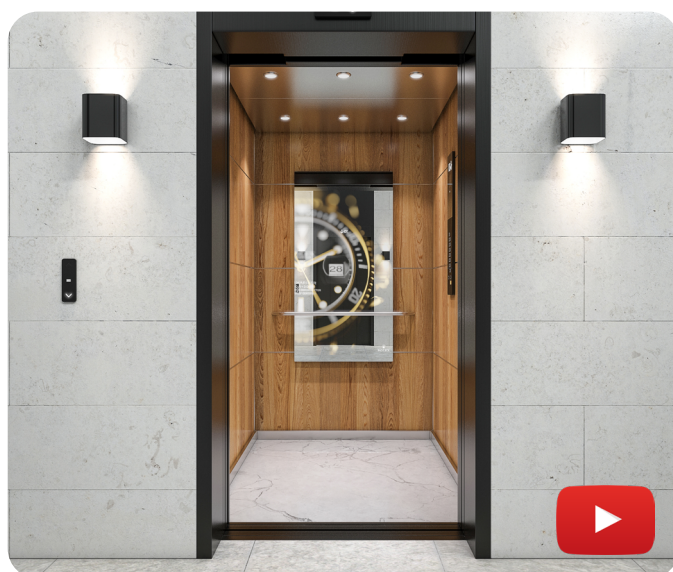

With a range of options, including various formats and designs, our screens are the perfect solution for businesses looking to take their communication strategy to the next level.

Our INVITE elevator screens are available in a digital mirror variant. This provides you with the added functionality of a mirror while also serving as a display for your digital content.

Smart Mirrors

Elevators commonly have mirrors, making them an excellent surface for implementing our smart mirror technology. The potential applications are extensive, and our custom IR sensors enable interactivity with the content. This interactivity enables displaying a welcome message upon entering the elevator, initiating an augmented reality (AR) experience, or toggling the screen on/off for eco-friendly usage.

Built-in screen modules

We offer **15.6"**, **21"**, **32"** and **55"** modules that can be fully integrated behind an elevator mirror, made to custom dimensions. The INVITE lift screen modules require no mounting bracket and have a total depth of only 27mm (approximately 1.1 inches), making them easy to install behind a mirrored wall without taking up much interior space. *Due in July'23
