

## VVVF4 to VVVF5 Adaption Instructions

The following adaption will need to be made in order to use the upgraded VVVF5 door control module in place of a VVVF4 or VVVF4+ unit.

The existing VF motor plug should be positioned in the input side of the new VVVF5 unit using the top 4 pins. A small section should be cut away using cutters from the input plug of the VVVF5 unit in order for the existing motor plug to fit correctly as shown below:
